

WAIOS

Autonomous Ecosystem CMDB

Linux-Powered Next-Gen AI ITSM Operating System

An Autonomous Ecosystem CMDB driven by multi-agent AI for self-healing cloud governance

ITIL V5 ALIGNED

B2B SAAS

PRE-SEED ROUND

Who We Are

Mission

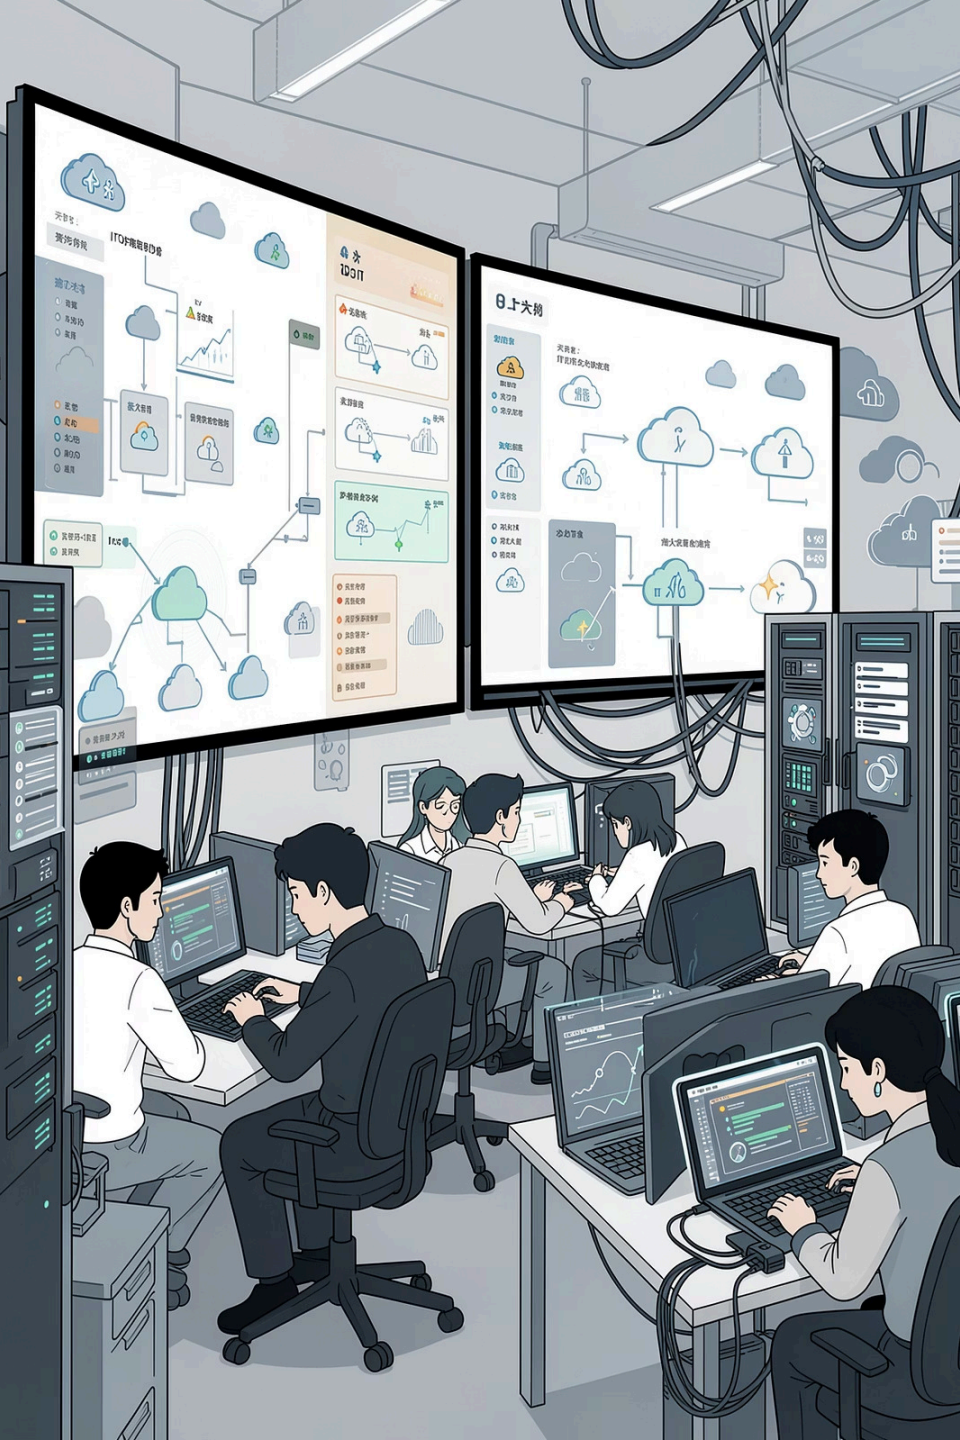

Transition enterprise cloud governance from costly manual engineering to a fully automated, closed-loop autonomous ecosystem reducing human IT overhead and compliance drift.

Vision

Become the global standard for autonomous ITSM and cloud governance powering enterprises with AI-driven, zero-touch infrastructure management at scale.

Platform

ITIL v5-aligned B2B SaaS built on secure Enterprise Linux, delivering sub-15-second MTTD, native compliance, and multi-cloud automation across AWS, Azure, and GCP.

The Crisis in Enterprise IT Operations

70%

Manual Effort

of enterprise IT operations remain manual driving unsustainable cost and human error

\$4.44M

Average Breach Cost

IBM 2025 global average cost of a data breach largely from compliance failures

241

Days to Detect

Industry average Mean Time to Detection WAIOS cuts this to under 15 seconds

40%

Cloud Waste

of cloud spend is wasted on misconfigured, ungoverned, or idle resources

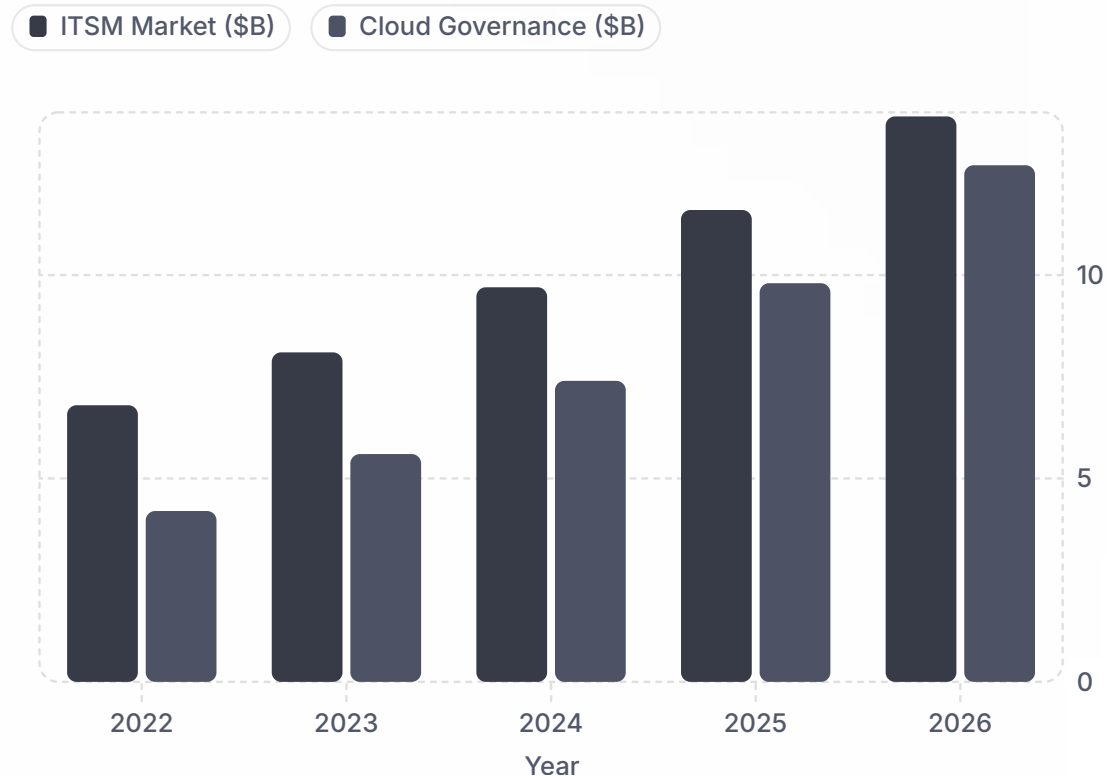

The WAIOS Solution

WAIOS replaces manual IT operations with a closed-loop autonomous ecosystem built on secure Enterprise Linux, enforcing compliance natively, and orchestrating infrastructure without root credentials.

From continuous discovery to automated remediation WAIOS operates end-to-end without human intervention, achieving sub-15-second MTTD and minimizing compliance drift by design.

Market Opportunity

A \$26B+ Combined Market by 2026

The global ITSM market is projected to reach **\$13.9B by 2026**, while cloud governance and automation is surging to **\$12.7B** driven by multi-cloud complexity and regulatory pressure.

- CAGR of 15%+ in enterprise ITSM SaaS
- Autonomous operations is the fastest-growing segment
- ISO compliance mandates accelerating enterprise adoption
- Multi-cloud environments demand unified governance

WAIOS Unified Command Center

Real-Time Autonomous Infrastructure Monitoring & Human-in-the-Loop Gateway

Our command center provides unparalleled visibility and control over your autonomous cloud ecosystem.

- **Active Multi-Agent Swarm Visualization:** Live dashboard display of operational status for autonomous AI agents across global multi-region clusters (US-EAST, EU-WEST, AP-SOUTH), aligning with ISO/IEC 20000-1 for service management.
- **Sub-15 Second Telemetry Sync:** Rootless orchestration continuously pulls critical metrics (Compute, Memory, Network) from tenant target accounts in real-time, adhering to ISO/IEC 27001 for information security.
- **WAI-Advisor Interactive SRE Interface:** Generative AI-powered interactive console allows CTOs or SRE teams to query architecture status or provide 1-click release approvals, per ISO/IEC 20000-1.

WAIOS Core Brain: Autonomous ITIL Service Design

How our AI agents enforce global compliance and risk planning before runtime.

WAI Trust & Legal

ISO 27001 / ISO 20000-1

Acts as automated digital law. Enforces Zero-Trust architecture, AES-256 encryption, and validates business contract SLA boundaries in real-time.

WAI Operation & Financial

ISO 22301 / FinOps

Smart sensor <15 seconds for infrastructure drift detection via Forensic Blackbox, plus AI Accountant to prevent cloud tenant cost bloat.

WAI Kreatif & Marketing

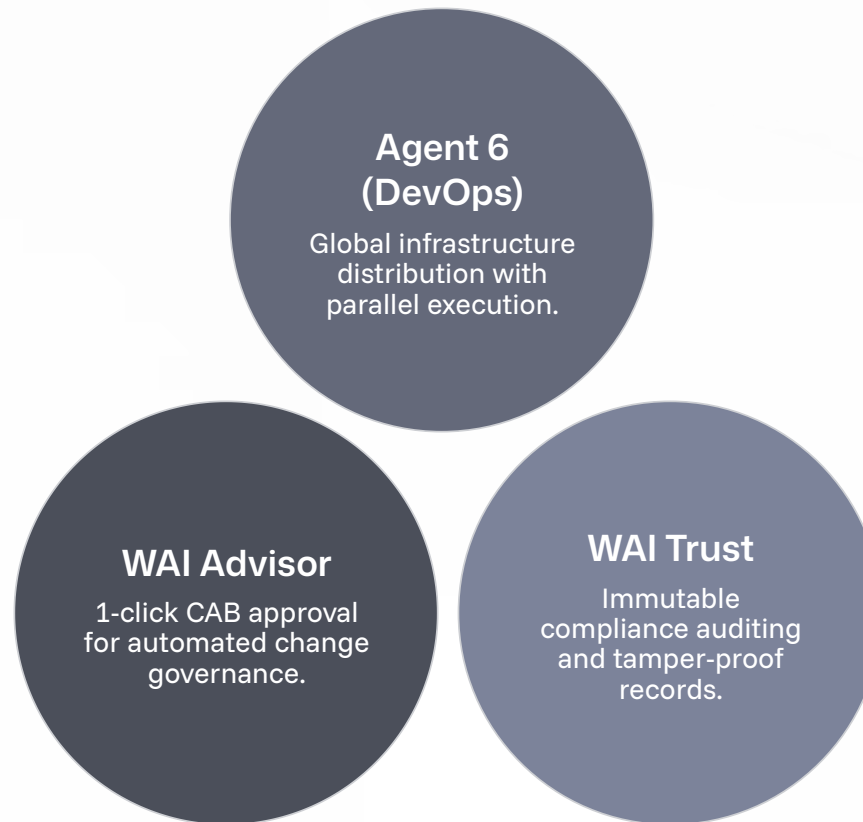

Automated Crisis Protocol

Reduces miscommunication during crises. Automatically composes and releases public status pages and investor reports when incidents occur.

WAIMS Tech Engine - Support & Operations

Removing human overhead through multi-agent parallel execution.

The WAIMS Tech Engine is the operational core, orchestrating a suite of AI agents to execute critical IT operations autonomously, efficiently, and with inherent compliance.

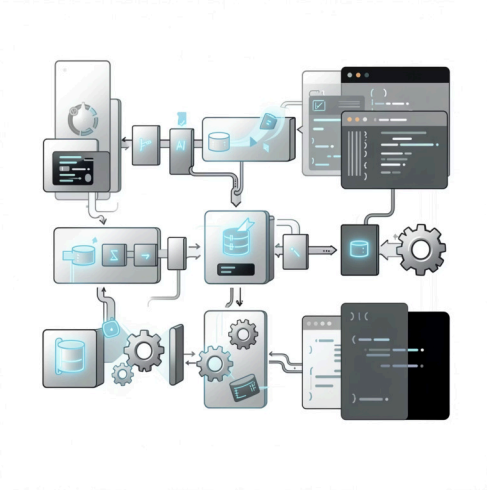

- **Autonomous CAB:** WAI Advisor instantly calculates code risk, enabling data-driven, 1-click release approvals, replacing manual Change Advisory Board meetings.
- **Automated Release Management:** Agent 6 (DevOps) orchestrates global infrastructure fixes via the IaC Distributor Engine (AWS CloudFormation StackSets).
- **Immutable Compliance Auditing:** WAI Trust continuously monitors the network, logging all compliance evidence directly to a permanent data vault for ISO/IEC 27001 adherence.

Product Deep Dive: WAIMS Tech Engine

The Proprietary Engine: WAIMS Tech (Automated Software Factory)

The core production engine behind WAIOS is WAIMS Tech, a state-of-the-art Automated Software Factory running a Parallel Production Gateway. Powered by the CoreWAI Engine, WAIMS Tech deploys 9 specialized autonomous AI agents across 4 operational phases: Design & Template, Compliance & Security, Distribution & Release, and Cleaning & Efficiency. These agents work concurrently to handle continuous infrastructure discovery, security scanning, compliance verification, release automation, context optimization, and infrastructure self-healing across AWS, Azure, and GCP out-of-the-box.

WAIMS Tech - Automated Software Factory

WAIMS stands for WAI Management System Technology. Powered by the **CoreWAI Engine**, WAIMS Tech deploys **9 specialized autonomous AI agents** working concurrently through a Parallel Production Gateway and synchronizing every action with the CMDB as the Single Source of Truth.

Phase 1: Design & Template

- **Architect**
Generates & syncs real-time infrastructure topology mapping into the Modern CMDB.
- **Modular Code**
Generates modular code artifacts and syncs them to the CMDB for traceable configuration alignment.

Phase 2: Compliance & Security

- **Rule Checker**
Audits infrastructure changes against global compliance rules in the CMDB.

Phase 3: Distribution & Release

- **DevOps Agent**
Triggers automated configuration rollback if drift is detected in the CMDB.

Phase 4: Cleaning & Efficiency

- **AI Context Purger (WAI Context Janitor)**
Automatically cleans, optimizes, and summarizes AI agent memory and context to prevent token waste and AI hallucination. Reduces API token costs by 40-50% while maintaining instant response performance.

- **Builder**
Deploys code baselines verified against active CMDB configuration states.

- **Cyber Auditor**
Monitors multi-account anomalies and logs immutable security states to CMDB. **[ISO/IEC 27001]**

- **GitOps**
Coordinates distributed release workflows and policy-controlled delivery pipelines. **[ISO 22301]**

- **Autonomous Site Janitor (WAI Resource Reclaimer)**
Low-level infrastructure cleaning agent that monitors server performance (EC2, databases, containers), automatically clears cache, rotates logs, and triggers safe micro-restarts during off-peak hours to prevent Out of Memory errors and ensure self-healing without human SRE intervention.

WAIOS Fully - Automated GitOps Pipeline

Our GitOps pipeline revolutionizes software delivery by automating every stage, ensuring speed, compliance, and resilience without human intervention.

Autonomous Code Promotion

AI handles PR generation, testing, and multi-environment staging alignment within minutes, removing manual review bottlenecks.

Zero-Touch DR Synchronization

Every production release instantly bakes and mirrors code configurations to the Disaster Recovery (DR) environment automatically, adhering to **ISO 22301**.

📋 **The Metric Impact:** Shifts code lifecycle operations from weeks of human meetings to sub-hour autonomous deployments with automated compliance locks [**ISO/IEC 20000-1**].

Enterprise - Grade Risk Mitigation: ISO Pillars & Automated Forensic Blackbox with HITL Safety Gates

WAIOS implements a robust fail-safe system to ensure absolute control and accountability, combining continuous logging with critical human oversight where it matters most.

Forensic Black Box

Continuously records **immutable metrics & logs** of every logical decision made by all 9 AI Agents. This provides instant, tamper-proof audit trails for forensic analysis, ensuring **ISO/IEC 27001** compliance.

Human-in-the-Loop (HITL) Safety Gate

For high-impact infrastructure changes, WAIOS presents automated recommendations to the Unified Command Center, requiring **1-click CTO/SRE approval** before execution, preventing blind AI decisions.

While **Traditional Legacy IT** can take **days or weeks** of manual log forensics to recover from critical cloud misconfigurations, **WAIOS Autonomous Governance** leverages Black Box versioning for immediate rollback, audit, and permanent hotfix deployment **in under 1 hour**, aligning with **ISO/IEC 20000-1** standards.

Enterprise - Grade Risk Mitigation: ISO Pillars & Automated Forensic Blackbox with HITL Safety Gates

WAIOS removes systemic cloud risks by embedding rigorous international auditing compliance directly into the runtime architecture, enforcing unmatched reliability and control.

To ensure unconditional reliability, WAIOS runs a secure **Forensic Blackbox infrastructure**. Every architectural drift, metric validation, and change event is immutably logged for comprehensive audit trails.

If an operational anomaly is identified, WAIOS features a rapid automated version rollback mechanism, resetting the client's cloud infrastructure to its last known perfect state instantly. This architecture enforces a strict **Human-in-the-Loop (HITL) guardrail**: while threat detection and rollback calculations happen autonomously in under 15 seconds, critical production modifications require a secure 1-click human validation gate, balancing hyper-automation with ironclad corporate control.

Radical Investor Transparency: The WAI Business App & Live WAI BoD Analytics

Removing information asymmetry with an on-demand, AI-driven investor cockpit backed by untamperable forensic logs.

Direct WAI BoD Query Interface

Investors can directly interact with WAI BoD using natural language to request macro-economic reports and instant financial outlook predictions without monthly reporting lag.

Tamper-Proof Investor Data Isolation (Via Black Box)

For Investors: To guarantee absolute objectivity, WAI BoD on the WAI Business App pulls aggregate growth data, and tenant licenses directly from the Forensic Black Box (immutable permanent logs), not from operational databases.

Full Master CMDB Access (CEO Exclusive)

Direct access to Master CMDB is strictly isolated exclusively for CEO and internal SRE for low-level architecture topology control, drift mitigation, and Zero-Trust access rights management.

WAI Ecosystem - Live Enterprise Testbed

WAI Ecosystem is a live enterprise testbed built to prove that WAIOS CMDB can automate multi-account architecture, detect anomalies in under 15 seconds, and prevent configuration leaks on real systems.

WAI User App

Native consumer platform for end-users

WAI Merchant App

Seller portal with integrated storefront

WAI Food

Hyper-local food commerce & data layer

ChatWAI

Multi-agent spiritual, health & business AI

WAI Hub

Central services repository & marketplace

WAI Pay

Tier-1 Xendit Payment Gateway integration

Business Model: Multi - Tier Enterprise SaaS

High-Margin, Predictable ARR Driven by Autonomous Value Tiers.

Tier 1 - Base Infrastructure (Core Engine)

Model: Recurring SaaS licensing
per-tenant slot

- Continuous asset discovery
- Automatic inventory sync
- Multi-account mapping

Tier 2 - Compliance & Advanced Security (The Auditors)

Model: ISO compliance add-on
modules

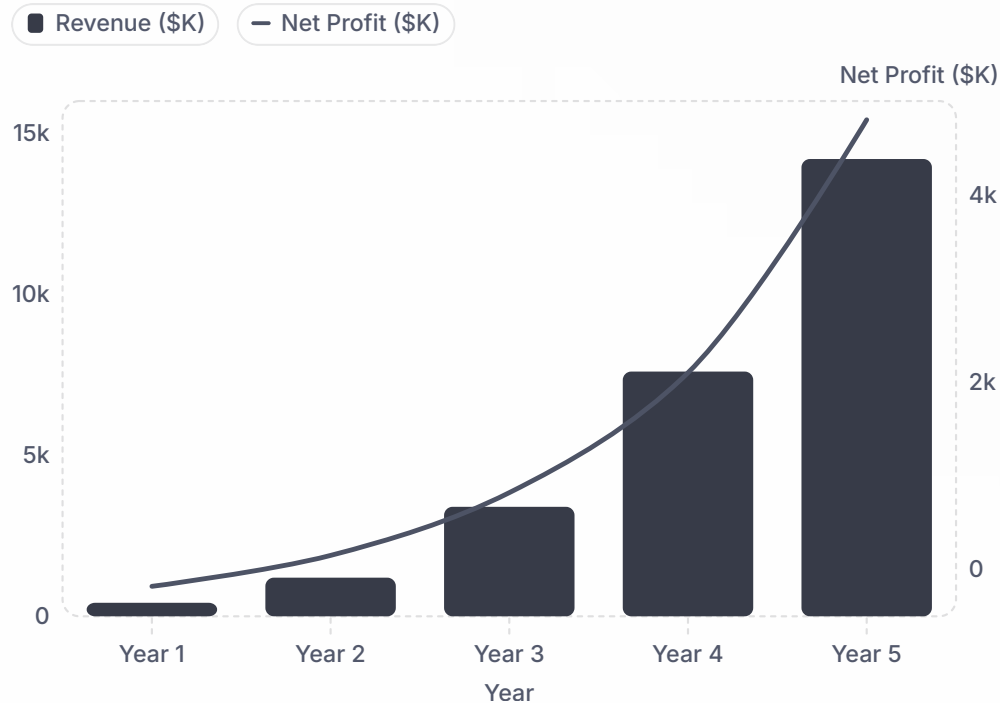

- Real-time audit evidence
- Zero-trust enforcement
- Policy drift mitigation [ISO/IEC 27001]

Tier 3 - Hyper-Automation (The AI Swarm)

Model: Premium AI Agent tiers &
automated GitOps integration

- Sub-15 second auto-remediation
- Autonomous CAB
- Zero-touch DR sync [ISO 22301]

Financial Projections: 5-Year Outlook

Path to Profitability by Year 2

Driven by compounding B2B SaaS ARR, WAIOS reaches **break-even in Year 2** and scales to **\$14.2M revenue by Year 5**.

1. **Predictable & Scalable ARR** Structured monetization using monthly/annual subscription model (per-tenant infrastructure slots) that delivers high cash flow stability [COBIT 2019].
2. **High Net Revenue Retention (NRR)** Revenue expansion driven by upsell paths for international compliance modules (ISO 27001, ISO 20000-1) and AI Agent capacity additions as client cloud environments grow [ISO/IEC 20000-1, ISO/IEC 27001].
3. **Direct B2B Sales** to acquire Enterprise Design Partners.
4. **Capital-Efficient Scale** With projected SaaS gross margins of 75%+, pre-seed funding concentrated purely on product maturation without diversion to third-party logistics operations [COBIT 2019].

Funding Ask: \$150K Pre - Seed Round

1

70% Core Engineering & AI Training

Technology Readiness Level (TRL) - Mature the stability of 9 WAIOS AI Agents from internal testbed phase to a public SaaS platform ready for multi-tenant deployment

2

20% Cloud Infrastructure & Security Compliance

ISO Compliance Automation - Ensure real-time audit evidence automation is ready for global market regulations

3

10% Go-To-Market (B2B)

Enterprise Closed Beta - Acquire and integrate WAIOS into 3-5 first corporate clients (Design Partners) for system validation outside the WAI ecosystem

☐ All funds are allocated to drive technology maturity and enterprise validation.
